

PA- Supplemental Guidance

ANM24 Upland forest wildlife structures

*Criteria – Identify one species or group of species native to the forest type.
Identify existing forest stand characteristics that don't meet the species targeted habitat needs.
List specific structures that could provide habitat for identified species life stages.

*This can be included in a Forest Stewardship Plan or a comparable forest conservation plan.

1-4 Follow national guidance on enhancement sheet.

Applicable acres are all the forestland acres.

Applied will be determined by the identified structures needed to meet the targeted wildlife species needs.

Forestland – System/acre

No Compatibility issues.
