

## ***PA- Supplemental Guidance***

### **ENR-05**

#### **Locally Grown and Marketed Farm Products –**

The Nutrient Management Plan – Producer has records that demonstrate nutrient source and application method, based on current soil test recommendations and manure analysis. Environmental risks of nutrient loss are minimized by observing PA State setbacks from sensitive areas. This plan is not required to be a formal Act38 or 590 Plan.

The Feed Management Plan must document that the feeding regime has been analyzed to minimize nutrients in manure. This includes a nutrient analysis of the TMR and a manure analysis. This plan is not required to meet the NRCS 592 Standard.

The Marketing Plan can be developed by a consultant or the producer. For assistance developing a marketing plan, refer to:
