

## ***PA- Supplemental Guidance***

**WQL-12** **Managing livestock access to water bodies/courses** – Stabilize areas where livestock access streams, lakes, ponds, etc. with stone, concrete slats, or manufactured stream stabilizing materials to control erosion. Fence these areas to direct livestock to the stabilized areas. Fence installed to exclude livestock from water bodies or water courses must be a minimum of 20 from the water edge. Off stream water system development in conjunction with a managed rotational grazing system is acceptable. Installation of a managed rotational grazing system that has the stream as a paddock managed separate from the rest of the system is acceptable as well. An off stream water source is encouraged.

Pastureland – System/acre

Not compatible with ANM23

Forestland – System/acre

Forestland is not typically grazed by livestock in PA

Not compatible with PLT05, SQL07

No additional guidance for 2011-1
